

## **VARMS Gate Combination Lock Instructions**

We have decided to go to a combination lock for the VARMS entrance gate due to the excessive cost of new keys. It also gives us the opportunity to change the combination easily and advise all members by SMS.

It is recommended you keep the SMS sent with the combination number in case you forget it. Keep your key as is still used for access to some of our gliding sites.

To open the lock select the combination number and press the 2 parts of the lock together as shown. It will then spring open.

You must randomly change the tumblers before the lock will close. When closing the gate please insert the rectangular steel section from below as shown, so the next person does not have to stand on their head to open the lock

If you have any problems call the VARMS Club President:

Ken Madill – Mobile 0411 793 122
